

Appln. No.: 10/078,372

Response/Amendment dated: May 16, 2006

Response to Office Action dated December 28, 2005

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A method of generating an animation by displaying of a sequence of images in a wireless handheld communication device, comprising:

generating the animation by editing of at least one of the images in said wireless handheld communication device prior to the generating of the animation, the editing comprising at least one of the steps in the group consisting of: adding movement, changing individual pixels, and adding text; and

successively displaying said sequence of images in said wireless handheld communication device in a predetermined order and with predetermined intervals between the images; and wherein

the generating of the animation by editing of the at least one of the images and successively displaying of said sequence of images by said wireless handheld communication device optimizes display resolution of the animation generated by the terminal.

2. (Previously Presented) A method according to claim 1, wherein the sequence of images is displayed repeatedly for a number of times, a user of the handheld communication device sets said number of times the display of the sequence of images is to be repeated.

3. (Currently Amended) A method according to claim 2, wherein the handheld communication device compares said number of times the displaying of the sequence of images

Appl. No.: 10/078,372  
Response/Amendment dated: May 16, 2006  
Response to Office Action dated December 28, 2005

is to be repeated with a predetermined number; and if said number of times the displaying of the sequence of images is to be repeated exceeds said predetermined number, the handheld communication device only repeats the display sequence said predetermined number of times.

4. (Previously Presented) A method according to claim 3, wherein the handheld communication device repeats the display sequence said predetermined number of times once more every time the handheld communication device is activated afterwards.

5. (Previously Presented) A method according to claim 1, wherein the editing of at least one of the images prior to the generating of the animation includes resizing the images into a display size being specific for an application in the handheld communication device in which the animation has to be used.

6. (Previously Presented) A method according to claim 5, wherein the user controls the resizing of only one of the images and the handheld communication device automatically resizes the remaining images.

7. (Previously Presented) A method according to claim 1, wherein the editing of at least one of the images prior to the generating of the animation includes displaying of the images as bit-map pattern, and changing said bit-map pattern under control of a user of the handheld communication device, storing the edited image, transferring the changes to the remaining images of the sequence.

Appln. No.: 10/078,372

Response/Amendment dated: May 16, 2006

Response to Office Action dated December 28, 2005

8. (Currently Amended) A wireless handheld communication device having a processor, transceiver means for communication via a wireless network, and a display, said processor adapted to generate an animation in said display by displaying a sequence of images, said wireless handheld communication device comprising:

means for generating the animation including means for editing ~~of~~ at least one of the images prior to the generating of the animation, the editing comprising at least one step in the group consisting of: ~~of~~ adding movement, changing individual pixels, and adding text; and

means for successively displaying said sequence of images in a predetermined order and with predetermined intervals between the images; and wherein

the generation of the animation by editing of the at least one ~~of~~ the images and successively displaying of said sequence of images by said wireless handheld communication device optimizes display resolution of the animation generated by the terminal.

9. (Previously Presented) A handheld communication device according to claim 8, wherein the sequence of images is displayed repeatedly for a number of times, and said handheld communication device has means for setting the number of times the display of the sequence of images has to be repeated.

10. (Previously Presented) A handheld communication device according to claim 9, wherein the processor is operable to compare the number of times the display of the sequence of images is to be repeated with a predetermined number; and if the processor deems that the number of times the display of the sequence of images is to be repeated exceeds said predetermined

Response to Office Action dated December 28, 2005

number, the processor is operable to only repeat the display sequence said predetermined number of times.

11. (Previously Presented) A handheld communication device according to claim 10, wherein the processor is operable to repeat the display sequence said predetermined number of times once more every time the handheld communication device is activated afterwards

12. (Previously Presented) A handheld communication device according to claim 8, wherein the processor is operable to provide a picture viewer in the display by means of which the user may edit at least one of the images prior to the generation of the animation, and said editing includes resizing the images into a display size being specific for an application in the handheld communication device in which the animation has to be used.

13. (Previously Presented) A handheld communication device according to claim 12, wherein the user, by means of the picture viewer in the display, is able to control the resizing of only one of the images and the handheld communication device is operable to automatically resize the remaining images.

14. (Previously Presented) A handheld communication device according to claim 8, wherein the user, by means of the picture viewer in the display, may edit at least one of the images prior to the generating of the animation, includes means for displaying of the images as bit-map pattern, and means for changing said bit-map pattern under control of the user of the handheld

Response to Office Action dated December 28, 2005

communication device, means for storing the edited image, and means for transferring the changes to the remaining images of the sequence.

15. (Previously Presented) The method according to claim 1, wherein the wireless handheld communication device comprises a mobile phone.

16. (Previously Presented) The handheld communication device according to claim 8, wherein the wireless handheld communication device comprises a mobile phone.

17. (Previously Presented) A wireless handheld communication device comprising:

a keypad; and

a display, the display capable of displaying a sequence of images for generation of animation and an animation menu for a user of the wireless handheld communication device that includes;

an edit images menu, the edit images menu allowing pixel-wise editing of the images;

an add text menu, the add text menu allowing the adding of text to the animation;

a duration setting menu, the duration setting menu allowing the speeding up or the slowing down of the animation;

a loop setting menu, the loop setting menu allowing the setting of the number of repetitions of the animation;

a resizing menu, the resizing menu allowing the resizing of the images; and

Response/Amendment dated: May 16, 2006

Response to Office Action dated December 28, 2005

an add moving menu, the add moving menu allowing the adding of speed and direction to the animation; and wherein

the generation of the animation by editing of the at least one of the images and successively displaying of said sequence of images by said wireless handheld communication device optimizes display resolution of the animation generated by the terminal.

18. (Previously Presented) The handheld communication device according to claim 17, wherein the wireless handheld communication device comprises a mobile phone.

19. (Currently Amended) A computer program stored on a storage medium for execution by a processor, the computer program, when executed, causes the processor to execute a method of generating an animation by displaying of a sequence of images in a wireless handheld communication device, comprising:

generating the animation by editing of at least one of the images in said wireless handheld communication device prior to the generating of the animation, the editing comprising at least one step in the group consisting of: of adding movement, changing individual pixels, and adding text; and

successively displaying said sequence of images in said wireless handheld communication device in a predetermined order and with predetermined intervals between the images; and wherein
